

2007 – 2009 SHELBY GT500 Rear Letter Relocation Template INSTALLATION INSTRUCTIONS

STEP 1 - REMOVE OLD LETTERING

Be careful not to scratch the paint on your car. Use a hair dryer to heat the letters and soften the adhesive holding them to the car. Use fishing line to cut the letters off the car or a plastic putty knife to help pry the letters loose. Always use a soft cloth or something under the putty knife so as not to scratch the paint. Once the letters are removed use alcohol to remove any residue or wax, sealer from the install location.

Once the letters are removed you may find that there are "shadows" left where the old letters were or that you scratched the paint in the removal. Most times a professional detailer can buff the area to remove the shadows and scratches. This is best done before the install.

STEP 2 - PLACE THE TEMPLATE

Spray the rear of the deck lid with a liquid lubricant mixture (consisting of one spray bottle of water with one teaspoon of Dawn dish soap.) This will help in positioning the template in the correct location. Remove the template backing and lay the template in the approximate location.

STEP 3 - VERIFY PLACEMENT

Verify that the template is centered by lining up the center of the template (see mark on template) with the center of the brake light on the deck lid.

Then measure across all the letters to ensure they are all the same distance from the spoiler. Readjust as needed to ensure proper placement.

STEP 4 - INSTALL LETTERS IN TEMPLATE LOCATIONS

Dry off the location where the letters will go. Then pull the backing off the letters and installed them in the correct location based on the template making sure that they are straight. Be very careful. Once the letters are set it is very difficult to move them!

STEP 5 - REMOVE TEMPLATE

Remove the template!

STEP 6 - CLEAN UP

Final step is the cleanup using detail spray and you are done!

It doesn't get much easier than that!
